Abstract

The purpose of this study was to determine how the needs of students with disabilities are addressed by state coordinators of school-wide positive behavioral interventions and supports (PBIS) during professional development activities on positive behavioral strategies, school-wide systems, and school-wide commitment to the PBIS approach. Particular attention was given to how the needs of students with severe disabilities were addressed throughout training opportunities. Although the majority of state coordinators believed that students with severe disabilities can participate at least partially in school-wide PBIS programs, they indicated that this belief was not reflected in their state's PBIS initial professional development activities.

Practical Application

Traditionally, school-wide PBIS has been considered a whole school initiative that includes every student in the school. However, practice has not reflected this theoretical approach. Implications of this research were to highlight how schools could implement a system of support to address the needs of all students through providing effective professional development.
